SKILLS

Mobile & desktop

Flutter · Dart · BLoC / Cubit · Clean architecture · get_it

Backend

PHP 8 · MySQL / MariaDB · REST APIs · JWT · Supabase · PostgreSQL

Web

HTML · CSS · JavaScript · Tailwind CSS · SEO

Tools

Git & GitHub · GitHub Actions · Cloudflare · Firebase

STRENGTHS

- Full ownership: database, API, apps and deployment
- Multilingual & right-to-left interfaces
- Security: 2FA, role permissions, rate limiting
- Shared-core architecture across many apps

Dilkhosh Sadoun

Flutter & PHP developer

I design and build complete products on my own — the database, the API, the mobile and desktop apps, and the admin panels that run them. My work is in production: a live restaurant website and its staff system, a multi-app marketplace with a digital wallet, and a driving-theory learning app in four languages.

EXPERIENCE

Freelance Flutter & PHP developer

2023 – present

Self-employed · Norway

Glør Restaurant — website & admin panel

Client project · live

- Built the restaurant's site at glør-restaurant.no: multilingual menu with allergens, table bookings by capacity and opening hours, photo reviews, FAQ and a mailing list.
- Flutter admin panel for web, Windows and Android with role permissions, two-factor sign-in, live booking alerts and backups.
- Server-rendered pages with structured data for search; cut request concurrency so the shared host stopped failing under load.

Stack: PHP, MySQL, Flutter, JavaScript, Tailwind CSS, JWT

Glør Staff — staff & shift management

Client project

- Rosters by department with templates, open shifts and manager-approved swaps.
- Kiosk clock-in, approved timesheets exported to PDF, tip sharing, messages and tasks.
- Two account levels, two-factor sign-in and encrypted sensitive data; iPad and phone, Arabic and English.

Stack: Flutter, Dart, PHP, MySQL

Sooq — marketplace, delivery & digital wallet

Own product

- Seven Flutter apps — customer, courier, store, platform admin, wallet, wallet agent and wallet admin — on one shared core package.
- Wallet with top-ups, phone/QR transfers secured by PIN, loyalty points, and identity verification with device binding and biometrics.

Stack: Flutter, Dart, PHP, MySQL, REST

Teorivei — Norwegian driving theory app

Own product

- Learning app in Arabic, Kurdish Sorani, English and Norwegian: lessons, sign quizzes, timed mock exams, readiness tracking and a driving game with traffic rules.
- Content pipeline that turns source material into structured multilingual questions; admin panel for users, access and game levels.

Stack: Flutter, Dart, PHP, MySQL

Personal portfolio

dilkhosh-portfolio.pages.dev

- Bilingual static site built from Supabase by GitHub Actions and hosted on Cloudflare Pages at no cost, with a Flutter admin panel and row-level security.
